

# Lead and Mold Safe Work Practices Workshop

Investigate Before You Renovate!

Lead-based paint is common in homes built before 1978. Mold is a common result of hidden moisture problems and water damage to homes of any age. Lead and mold can pose a serious health risk to children, families, the workers and you. All remodeling and repair activities should use work methods that control the spread of mold spores, lead dust and debris.

**LaHouse Resource Center** is hosting a free workshop to demonstrate safe lead and mold control work practices for residential renovators, remodelers, painters, carpenters, and other contractors.

Date: **December 4, 2008**

Time: **9:00 AM to 5:00 PM**

Location: **LaHouse Resource Center (Teaching Center)  
Gourrier Ave. – LSU (off Nicholson, by golf course)  
Baton Rouge, Louisiana**

Parking: **Hassle Free - on site**

Cost: **FREE** (lunch not included)

To register: <http://leadsafe120408.eventbrite.com>  
or contact Diane Scimeca at 225-578-3608

## Benefits:

- Attendees will learn the skills to safely renovate older housing and prevent childhood lead poisoning and remove mold damage safely.
- Participants who attend the training and complete and pass a brief test will receive a certificate of course completion. This certificate will qualify them to work with contractors receiving federal money for construction and maintenance work on older housing.
- With this training, you will only need to take a one-half day refresher training when the new EPA certified renovator training is offered in 2009.
- Eligible for 7 continuing education units for Louisiana Residential Contractors.
