

The Sci Fi Channel sponsors a Home Energy Tune-up in Baton Rouge, Louisiana

Kateri Callahan of the Alliance to Save Energy

Vestal Tutterow, of the Alliance to Save Energy, explaining the energy improvements to the media

In October of 2007, DNR partnered with the Alliance to Save Energy, and the Sci Fi Channel to participate in a Home Energy Tune-up for the Clites Family home in Baton Rouge Louisiana. The Clites' won a nation wide competition sponsored by The Sci Fi Channel in which they won a complete home energy makeover. Insulation was added to the attic, weatherization was performed on the entire home, the air conditioning ducts were resealed and reinsulated, energy efficient lighting was installed and all of the appliances were replaced with new Energy Star appliances. The Sci Fi Channel provided the funding for the improvements, the Alliance to save Energy provided the homeowners with the energy improvement consultation and installation of the improvements, and DNR provided a home energy rating for the improved home as well as consultation to the homeowners on how the home is performing and possible future energy improvements.

As part of the event - all of the sponsors visited The Baton Rouge Center for Visual and Performing Arts where the Clites children attend school. The Energy Hog, accompanied by The Energy Hog Buster, visited several classrooms and discussed what they could do at home to conserve energy while answering questions from the students about energy efficiency
